• These bits are an ORed combination of the bit value shown and the next significant bit below (This rounds the color value to nearest color).

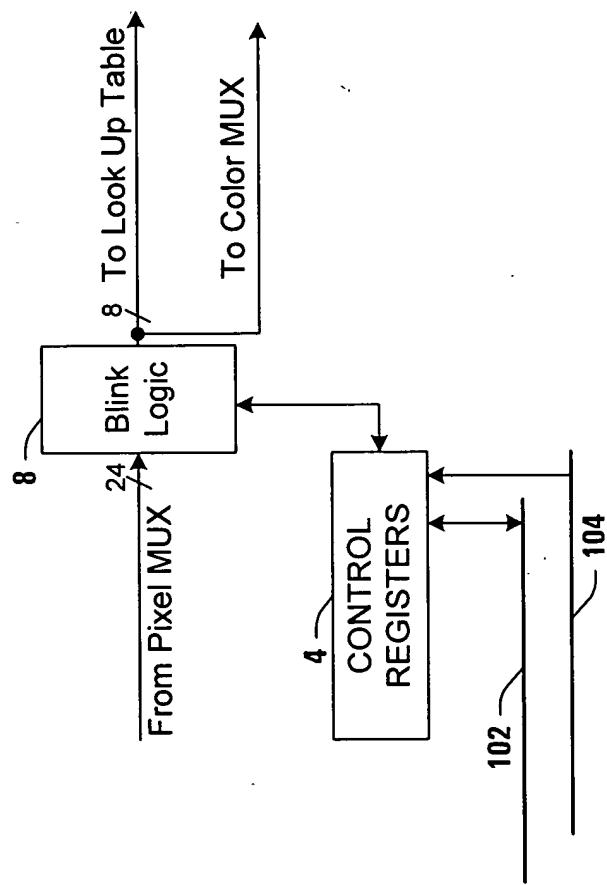

•• These bits do not get a substitute and are defined to the values controlled by the pixel output mode in the upper part of the table.

••• These bits are pinned out in CL-EP9215 Dillon II only. They are the MSBs of the color channels.

•••• Set PIXELMODE.P13951 high to use these pins as outputs in the CL-EP9209.
